

WiseCam[®]

Infrared camera for the inspection chamber

Data sheet

Description:

WiseCam is used to determine where there are rodents in the pipe system.

The camera is used before, during and after pest control with WiseTrap and gives the users a clear overview of the situation.

It can also be used to advantage for all other types of surveillance tasks in the sewer.

WiseCam sends out infrared light, and records all activity at the bottom of the inspection chamber in total darkness. It only records when it registers movement.

Its positioning at the top of the well just under the cover makes it easy and fast to get to the camera and to change the memory card, which holds up to 3 days recording.

WiseCam[®]

Infrared camera for the inspection chamber

Data sheet

Control box:

Electronic on/off control.

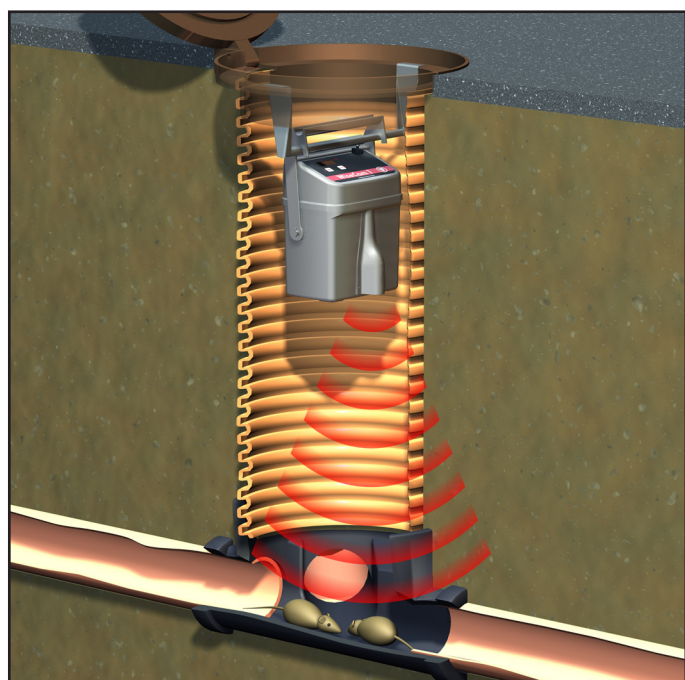

Inspection Chamber:

From Ø315 mm. Max 5 meter depth.
